

Our Final Warning: Six Degrees of Climate Emergency

By Mark Lynas

The climate crisis is the most pressing issue facing humanity today. The scientific evidence is clear: we are causing the planet to warm at an unprecedented rate, and the consequences are already being felt around the world.

In Our Final Warning, Mark Lynas, one of the world's leading climate scientists, presents a chilling and urgent account of the climate crisis and the six degrees of devastation that await us if we fail to act now.

Each degree of warming will bring with it a new set of devastating impacts. **One degree of warming** has already caused more extreme weather events, sea level rise, and melting glaciers.

Two degrees of warming will lead to even more extreme weather events, widespread crop failures, and the displacement of millions of people.

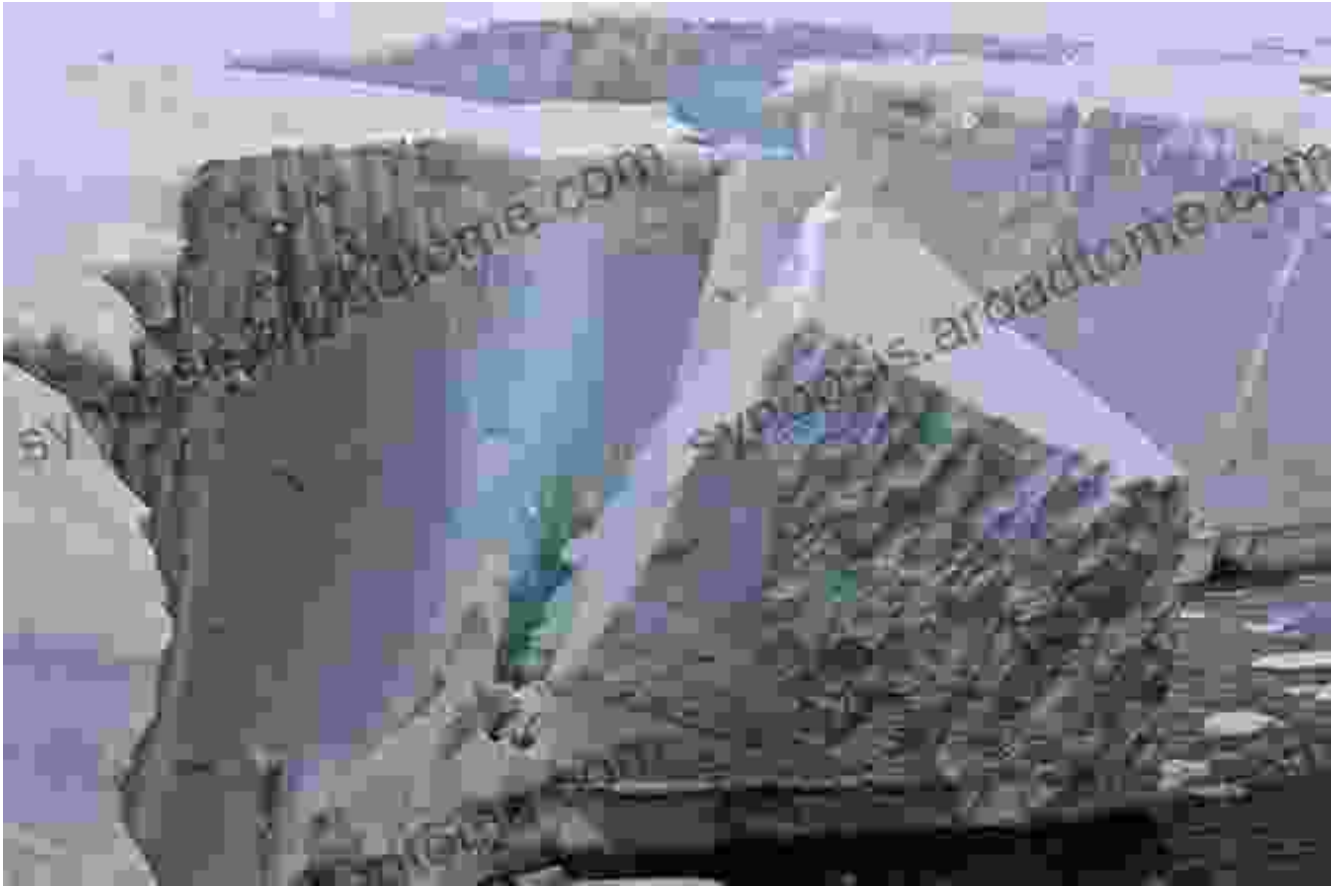

Three degrees of warming will cause the collapse of the Our Book Library rainforest, the melting of the Greenland ice sheet, and the loss of much of the world's coral reefs.

Four degrees of warming will make large parts of the world uninhabitable, with heat waves, droughts, and floods becoming commonplace.

Five degrees of warming will lead to the extinction of many species, the collapse of the food chain, and the displacement of billions of people.

Six degrees of warming will make the Earth a hothouse, with temperatures reaching levels not seen for millions of years. The human race could face extinction.

Our Final Warning is a stark warning about the future of our planet. But it is also a call to action. We still have time to avoid the worst impacts of climate change. But we need to act now.

This book is a must-read for anyone who cares about the future of our planet. It is a chilling and urgent account of the climate crisis, but it is also a call to action. We still have time to avoid the worst impacts of climate change. But we need to act now.
